Executive Summary: Cyclistic Case Study

Business Task

The primary objective is to analyze historical trip data to identify behavioral differences between annual members and casual riders to inform conversion strategies.

“Weekend Warrior” Tier

Capture high-volume leisure users with a lower-cost membership specifically for Friday-Sunday.

Commuter Campaign

Target rush-hour windows with "Stress-Free Commute" messaging to transition riders to member utility.

Seasonal Promotions

Increase presence at peak leisure stations (May-Aug) with QR codes for immediate member conversion.

Conclusion

Casual riders and annual members use Cyclistic bikes for fundamentally different purposes—members for utility and commuting, and casual riders for long-duration leisure. By creating a bridge between these two behaviors—specifically through a weekend-specific tier and a "commuter trial"—Cyclistic can turn "one-time" leisure users into long-term, profitable annual members.

Key Insights & Resources

Casual ridership grows by **400%** between April and August.

Casual trips average **60 minutes**, while members average only **16 minutes**.

5:00 PM is the critical conversion window, with over 500,000 combined rides.

Streeter Dr & Grand Ave account for the highest casual volume.
